

Student Journey *Autopilot*

Today every student lives in six tools and a person copies them from one to the next. Leads get dropped and course access arrives late. **One n8n workflow now carries every handoff**, and a separate alert workflow speaks up the moment any step fails.

6

tools connected

3

journeys automated

0

manual handoffs

3×

retries on every API call

1

config step to maintain

LINE A

Webinar opt-in

WordPress landing page or GoHighLevel funnel form

POST /student-journey/optin

GOHIGHLEVEL

Contact upserted

No duplicates, even on resubmits

GOHIGHLEVEL

Tagged “webinar-registered”

The tag picks the Klaviyo list

ZOOM

Webinar registrant added

Zoom sends the calendar invite and reminders

KLAVIYO

Profile saved with join link

Written first, so email 1 already has it

KLAVIYO

Nurture flow starts

Added to the list that triggers the sequence

GOHIGHLEVEL

Join link on contact

Ready for SMS reminders

LINE B

Purchase → access

WooCommerce order, GHL order or Stripe checkout

POST /student-journey/enrollment

WORDPRESS

Student account found or created

Exact email match, never a second account

LEARNDASH

Course unlocked

One grant per product bought. Nobody flips a switch.

GOHIGHLEVEL

Tagged “enrolled”

The sales pipeline stays accurate

KLAVIYO

“Course Enrolled” event

Starts onboarding and ends the webinar nurture

LINE C

Recording → replay

Riverside recording ready

POST /student-journey/replay

ZOOM

Registrants and attendees pulled

Reads run first, so a failure leaves nothing half-done

WORDPRESS

Members-only replay published

Riverside link posted in the Replays category

KLAVIYO

“Replay Ready” to each registrant

Attendees get “thanks for coming”, no-shows get “you missed it”

ERROR LAYER · SEPARATE WORKFLOW

Nothing fails *silently*

01

Automatic retries

3 tries, 3 seconds apart. Rate limits and brief outages clear on their own.

02

Slack + email alert

Names the tool, the step and the API error, with a link to the exact run.

03

Safe one-click retry

Every write is an upsert or deduplicated, so rerunning never double-sends.

04

Loud on missing config

A product with no course mapped raises an alert. The student is never silently dropped.

05

7:30 am health check

Tests all four logins daily and warns before an expired token reaches a real signup.
